## INTERNSHIP

1.- 1)

Among the following identify the one in which dimensionality reduction reduces.
a) Performance
b) statistics
c) Entropy
d) Collinearity
Ans Collinearity
2) Which of the following machine learning algorithm is based upon the idea of bagging?
a) Decision Tree
b) Random Forest
c) Classfication
d) SVM
Ans Random Forest
Ans Random Forest
Ans Random Forest  3) Choose a disadvantage of decision trees among the following.
3) Choose a disadvantage of decision trees among the following.
<ul><li>3) Choose a disadvantage of decision trees among the following.</li><li>a) Decision tree robust to outliers</li></ul>
<ul><li>3) Choose a disadvantage of decision trees among the following.</li><li>a) Decision tree robust to outliers</li><li>b) Factor analysis</li></ul>
<ul><li>3) Choose a disadvantage of decision trees among the following.</li><li>a) Decision tree robust to outliers</li><li>b) Factor analysis</li><li>c) Decision Tree are prone to overfit</li></ul>
<ul><li>3) Choose a disadvantage of decision trees among the following.</li><li>a) Decision tree robust to outliers</li><li>b) Factor analysis</li><li>c) Decision Tree are prone to overfit</li></ul>
<ul> <li>3) Choose a disadvantage of decision trees among the following.</li> <li>a) Decision tree robust to outliers</li> <li>b) Factor analysis</li> <li>c) Decision Tree are prone to overfit</li> <li>d) all of the above</li> </ul>
<ul> <li>3) Choose a disadvantage of decision trees among the following.</li> <li>a) Decision tree robust to outliers</li> <li>b) Factor analysis</li> <li>c) Decision Tree are prone to overfit</li> <li>d) all of the above</li> </ul>

sample data?
a) Data Training
b) Sample Data
c) Training data
d) None of the above
Ans Training Data
5)
Which of the following machine learning techniques helps in detecting the outliers in data?
a) Clustering
b) Classification
c) Anamoly detection
d) All of the above
Ans Anamoly Detection
6)
6) Identify the incorrect numerical functions in the various function representation of machine
Identify the incorrect numerical functions in the various function representation of machine
Identify the incorrect numerical functions in the various function representation of machine learning.
Identify the incorrect numerical functions in the various function representation of machine learning.  a) Support Vector
Identify the incorrect numerical functions in the various function representation of machine learning.  a) Support Vector  b) Regression
Identify the incorrect numerical functions in the various function representation of machine learning.  a) Support Vector  b) Regression c) Case based
Identify the incorrect numerical functions in the various function representation of machine learning.  a) Support Vector  b) Regression c) Case based
Identify the incorrect numerical functions in the various function representation of machine learning.  a) Support Vector  b) Regression  c) Case based  d) Classification
Identify the incorrect numerical functions in the various function representation of machine learning.  a) Support Vector  b) Regression  c) Case based  d) Classification

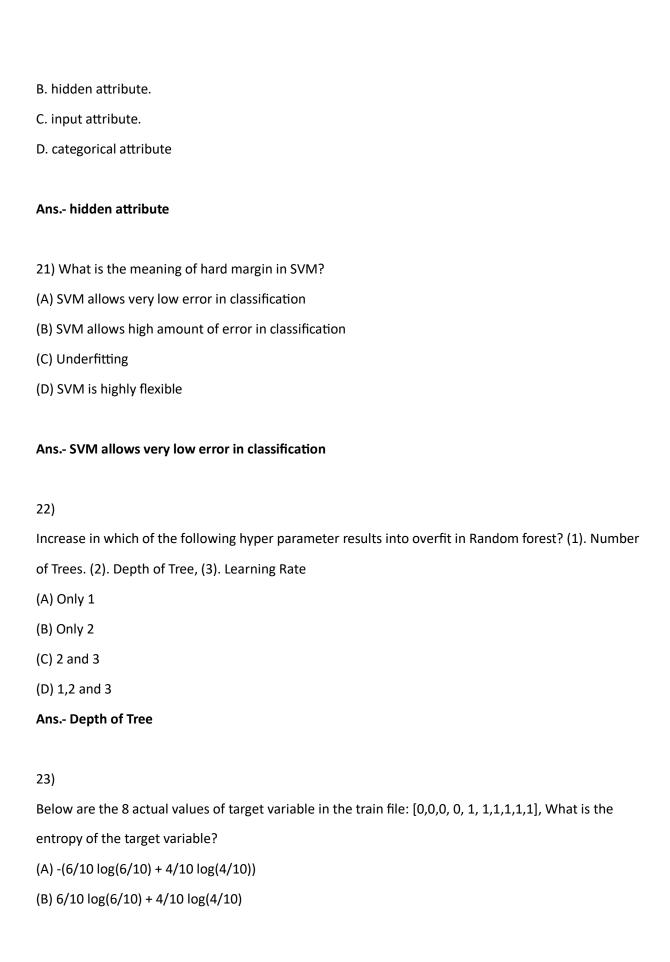

a) Statistical learning theory
b) Computational learning theory
c) None of the above
d) Both a and b
Ans Both A and B
8)
Identify the difficulties with the k-nearest neighbor algorithm.
a) Curse of dimensionality
b) Calculate the distance of test case for all training cases
c) Both a and b
d) None
a) None
Ans Both A and B
9)
The total types of the layer in radial basis function neural networks is
a) 1
b) 2
c) 3
d) 4
Ans3
10)
Which of the following is not a supervised learning
a) PCA
b) Naïve bayes

c) Linear regression
d) KMeans
Ans PCA
11) What is unsupervised learning?
a) Number of groups may be known
b) Features of groups explicitly stated
c) Neither feature nor number of groups is known
d) None of the above
Ans Neither feature nor number of group is known
12) Which of the following is not a machine learning algorithm?
a) SVM
b) SVG
c) Random Forest Algorithm
d) None of the above
Ans SVG
13) is the scenario when the model fails to decipher the underlying trend in the input data
a) Overfitting
b) Underfitting
c) Both a and b
d) None of the above
Ans Underfitting

14) Real-Time decisions, Game AI, Learning Tasks, Skill acquisition, and Robot Navigation are
applications of
a) Reinforcement learning
b) Supervised learning
c) Unsupervised Learning
d) None of the above
Ans Reinforcement learning
15) What is called the average squared difference between classifier predicted output and actual
output?
55) What is called the average squared difference between 55classifier
a) Mean relative error
b) Mean squared error
c) Mean absolute error
d) Root mean squared error
Ans Mean squared error
16) Logistic regression is a regression technique that is used to model data having a
outcome.
a) Linear, binary
b) Linear, numeric
c) Nonlinear, binary
d) Nonlinear, numeric
Ans Linear , Binary

17) You are given reviews of few netflix series marked as positive, negative and neutral. Classifying

reviews of a new netflix series is an example of
A. supervised learning
B. unsupervised learning
C. semisupervised learning
D. reinforcement learning
AnsSupervised learning
18) Following is powerful distance metrics used by Geometric model
A. euclidean distance
B. manhattan distance
C. both a and b
D. square distance
Ans Both A and B
19) Which of the following techniques would perform better for reducing dimensions of a data set?
A. removing columns which have too many missing values
B. removing columns which have high variance in data
C. removing columns with dissimilar data trends
D. none of these
Ans removing columns which have high variance in data
20) Supervised learning and unsupervised clustering both require which is correct according to the statement.
A. output attribute.

(C)  $4/10 \log(6/10) + 6/10 \log(4/10)$ 

(D)  $6/10 \log(4/10) - 4/10 \log(6/10)$ 

Ans.- -(6/10 log(6/10)+4/10 log(4/10))

24) Lasso can be interpreted as least-squares linear regression where

(A) weights are regularized with the l1 norm

(B) weights are regularized with the I2 norm

(C) the solution algorithm is simpler

Ans.- weight are regularized with the l1 norm

25) Consider the problem of binary classification. Assume I trained a model on a linearly separable training set, and now I have a new labeled data point that the model properly categorized and is far away from the decision border. In which instances is the learnt decision boundary likely to change if I

now add this additional point to my previous training set and re-train? When the training model is,

(A) Perceptron and logistic regression

(B) Logistic regression and Gaussian discriminant analysis

(C) Support vector machine

(D) Perceptron

Ans.- Logistic regression and Gaussain discriminant analysis

26) Assume you've discovered multi-collinear features. Which of the following actions do you

intend to take next? (1). Both collinear variables should be removed. (2). Instead of deleting both

variables, we can simply delete one. (3). Removing correlated variables may result in information

loss. We may utilize penalized regression models such as ridge or lasso regression to keep such

variables.

(A) Only 1
(B) Only 2
(C) Either 1 or 3
(D) Either 2 or 3
Ans Both collinear variables should be removed.
27)
A least squares regression study of weight (y) and height (x) yielded the following least squares line:
y = 120 + 5x. This means that if the height is increased by one inch, the weight should increase by
what amount?
(A) increase by 1 pound
(B) increase by 5 pound
(C) increase by 125 pound
(D) None of the above
Ans increased by 5 pound
28)
The line described by the linear regression equation (OLS) attempts to?
(A) Pass through as many points as possible.
(B) Pass through as few points as possible
(C) Minimize the number of points it touches
(D) Minimize the squared distance from the points
Ans Minimize the squared distance from point

For two real-valued attributes, the correlation coefficient is 0.85. What does this value indicate?

- (A) The attributes are not linearly related
- (B) As the value of one attribute increases the value of the second attribute also increases
- (C) As the value of one attribute decreases the value of the second attribute increases
- (D) The attributes show a curvilinear relationship

## Ans.- As the value of one attributes decreases the value of the second attribute increases

30)

Which neural network architecture would be most suited to handle an image identification problem (recognizing a dog in a photo)?

- (A) Multi Layer Perceptron
- (B) Convolutional Neural Network
- (C) Recurrent Neural network
- (D) Perceptron

**Ans.- Convolutional Neural Network**
